RISK RATING

The risk rating refers to the volatility of the returns of the fund over the last five years. Standard deviation is a common measure used to demonstrate a fund's volatility, which indicates the tendency of the returns of a fund to rise or fall over a period of time. The standard deviation measures the degree to which the fund fluctuates in relation to its average return over a period of time. A low standard deviation indicates that the fund's fluctuation is close to the average whereas high standard deviation indicates that the fluctuation is more widely spread out from the average.

The standard deviation of the fund over the last five years is calculated using past returns history. Where a fund hasn't been in existence on the fund range long enough to generate the required five year history of returns, we use the standard deviation of the available returns of the fund, along with the standard deviation of the available returns as a suitable sector benchmark for the remaining time period provided by Morning Star Direct.

This standard deviation figure is then assigned to a relevant volatility interval. The volatility intervals have then each been allocated a risk rating from 1 to 5 as shown below, with 1 being low and 5 being high.

VOLITILITY	RISK RATING	DESCRIPTION
5 or Less	1	Funds offering maximum security. As far as possible, the risk of loss is minimised by investing in cash and near cash deposits in the fund currency.
5 - 10	2	Funds are likely to display limited volatility. Typical exposure in these funds will be to highly-rated government and corporate bonds in the fund currency, although there may also be some equity exposure. In addition, highly diversified funds with an exposure to multiple asset classes may be included here.
10 - 15	3	Funds seeking to achieve strong capital growth, with an emphasis on diversification. Multi-currency funds that would otherwise fall into a lower category may be included here.
15 - 20	4	Funds that are likely to be single-country equity funds, offering exposure to developed markets, or funds investing in emerging equity markets. In addition, diversified funds with a more aggressive investment approach may be included here.
20 or more	5	Funds with a more aggressive investment approach.

Source for all performance information: Morningstar, bid to bid with gross income reinvested back into the fund.

▲ Ethical profile.

¹ The funds show USD performance rather than the performance of the underlying Fund.

*Funds marked with ✓ are available for investment to residents of Spain.

Investors should be aware that unit prices and the income from units may fall as well as rise and that past performance is not a guide to the future.

Where a fund invests in securities designated in a different currency to the fund or where an underlying fund is denominated in a different currency, investments may rise and fall purely as a result of exchange rate fluctuations.

Sector classifications are proprietary to Utmost PanEurope dac.

The performance figures shown are inclusive of all external fund management fees and Utmost PanEurope dac's Annual Management Charge; however, they exclude product charges.

The currency that features at the beginning of the Utmost PanEurope dac fund names indicates the currency that the funds are denominated in (the base currency).

For example, the UTM IE GBP Compass Portfolio 3 is denominated in Sterling.

Utmost PanEurope dac's multi-currency pricing system allows Utmost PanEurope dac to take the price of a fund and, by applying an exchange rate to it, produce equivalent prices in other currencies. The fund codes shown under the heading 'additional repriced currencies' indicate the availability of multi-currency priced funds.

This Morningstar sourced information is provided to you by Utmost PanEurope dac and is used at your own risk. Morningstar take care to ensure that the information provided is correct.

Morningstar and Utmost PanEurope dac neither warrants, represents nor guarantees the contents of the information, nor do they accept any responsibility for error, inaccuracies, omissions or any inconsistencies herein.

Investors should be aware of the risks when investing in Emerging Market Funds as they may be subject to considerable fluctuations in value. They are additional to the normal risks inherent in securities. Local dealing restrictions may make certain securities illiquid. Investment in these Funds should be regarded as long-term in nature and is only suitable for sophisticated investors who understand the risks involved.

A WEALTH *of* DIFFERENCE
